PERFORMANCE MONITORING AND ACCOUNTABILITY 2020

**PMA2020** uses innovative mobile technology to support low-cost, rapid-turnaround surveys to monitor key indicators for family planning. The project is implemented by local university and research organizations in 11 countries, deploying a cadre of female resident enumerators trained in mobile-assisted data collection. PMA2020/Burkina Faso is led by l'Institut Supérieur des Sciences de la Population (ISSP) at the University of Ouagadougou. Overall direction and support is provided by the Bill & Melinda Gates Institute for Population and Reproductive Health at the Johns Hopkins Bloomberg School of Public Health through a grant from the Bill & Melinda Gates Foundation.

## SAMPLE DESIGN

PMA2016/Burkina Faso used a two-stage cluster design with urban-rural strata. The sample, which was increased to 83 enumeration areas (EAs) for this round, was drawn from the *l'Institut National de la Statistique et de la Démographie* (INSD) master sampling frame. Thirty new EAs were added to the 53 EAs from the previous rounds to reach the 83 EAs. In each EA, 35 households and up to three private service delivery points (SDPs) were selected. Three public SDPs were also selected. Households were systematically selected using the "Random Number Generator" application. Occupants in selected households were enumerated, and eligible women, that is, women of reproductive age (15-49), were contacted and consented for interviews. Data collection was conducted between March and May of 2016. A total of 2,803 households (97.9% response rate), 3,261 females (96.6% response rate) and 132 SDPs (98.5% response rate).
