

PMA2016/BURKINA FASO-R4

PERFORMANCE MONITORING AND ACCOUNTABILITY 2020

PMA2020 uses innovative mobile technology to support low-cost, rapid-turnaround surveys to monitor key indicators for family planning. The project is implemented by local university and research organizations in 11 countries, deploying a cadre of female resident enumerators trained in mobile-assisted data collection. PMA2020/Burkina Faso is led by l'Institut Supérieur des Sciences de la Population (ISSP) at Université Ouaga I Pr Joseph Ki-Zerbo. Overall direction and support is provided by the Bill & Melinda Gates Institute for Population and Reproductive Health at the Johns Hopkins Bloomberg School of Public Health through a grant from the Bill & Melinda Gates Foundation.

SAMPLE DESIGN

PMA2016/Burkina Faso Round 4 used a two-stage cluster design with urban-rural strata. The sample, which was increased from 53 to 83 enumeration areas (EAs) during the previous round (Round 3), was drawn from the l'Institut National de la Statistique et de la Démographie (INSD) master sampling frame. In each EA, 35 households and up to three private service delivery points (SDPs) were selected. Three public SDPs serving that EA were also selected. Households were systematically selected using the "Random Number Generator" application. Occupants in selected households were enumerated, and eligible women, that is, women of reproductive age (15-49), were contacted and consented for interviews. Data collection was conducted between November 2016 and January 2017. The final sample included a total of 2,747 households (97.9% response rate), 3,195 females (95.4% response rate) and 131 SDPs (97.0% response rate).
