PMA2020 / KONGO CENTRAL, DRC

SEPT-NOV 2017 (ROUND 6 IN DRC, ROUND 3 IN KONGO CENTRAL)

Performance Monitoring and Accountability 2020 (PMA2020) uses innovative mobile technology to support low-cost, rapid-turnaround surveys to monitor key indicators for family planning. The project is implemented by local universities and research organizations in 11 countries, deploying a cadre of female resident enumerators trained in mobile-assisted data collection. PMA2020/DRC is led by the University of Kinshasa's School of Public Health, in collaboration with Tulane University School of Public Health and Tropical Medicine. The study is funded by the Bill & Melinda Gates Institute for Population and Reproductive Health at the Johns Hopkins Bloomberg School of Public Health with support from the Bill and Melinda Gates Foundation.

Reproductive Health and Contraceptive Indicators

SAMPLE DESIGN

PMA2020/DRC used a two stage cluster design to draw a representative sample for the province of Kongo Central. A total of 52 enumeration areas (EA) were randomly sampled using probabilities proportional to size. After completing a household listing in each EA, 33 households per EA were randomly selected. All women of reproductive age (ages 15-49) within each selected household were contacted and consented for interviews. Private and public service delivery points (SDP) who provide services to the EA were also interviewed. The final sample included 1,664 households (97.9% response rate), and 1,689 females (98.2% response rate), and 116 SDPs (response rate 98.3%). Data collection for this round in Kongo Central was conducted between September and November 2017.

Percent of Facilities Offering Family Planning with Methods in Stock on Day of Interview (n=90; 49 Public, 41 Private)

■ Currently in stock, and no history of stockout in the past 3 months
■ Currently in stock, but history of stockout in the past 3 months
■ Current stockout
■ Not offered

Percent of All Public Facilities With At Least 3 or 5 Modern Contraceptive Methods, by Facility Type

Facility Type	3 or more methods	5 or more methods
Health Center (n=39)	69.2	43.6
Hospital (n=12)	91.7	58.3
Total	69.9	44.6

**Data from facility types with sample size less than 10 were calculated, but are not presented in this brief.

Service Delivery Points (n=116; 56 Public, 60 Private)

	Public	Private	Total
Among All Service Delivery Points:			
Offering Family Planning (%)	87.5	68.3	77.6
With Mobile Teams Visiting Facility In Last 6 Months (%)	10.7	1.7	6.0
